Disclosures

None relevant to this topic

Why is Papers useful to me?

- Provides excellent functionality in support of the development of reports, articles, projects and other presentations
- Helps develop professional research habits at any level of academic study
- Improves efficiency and organization

Why are good research tools important?

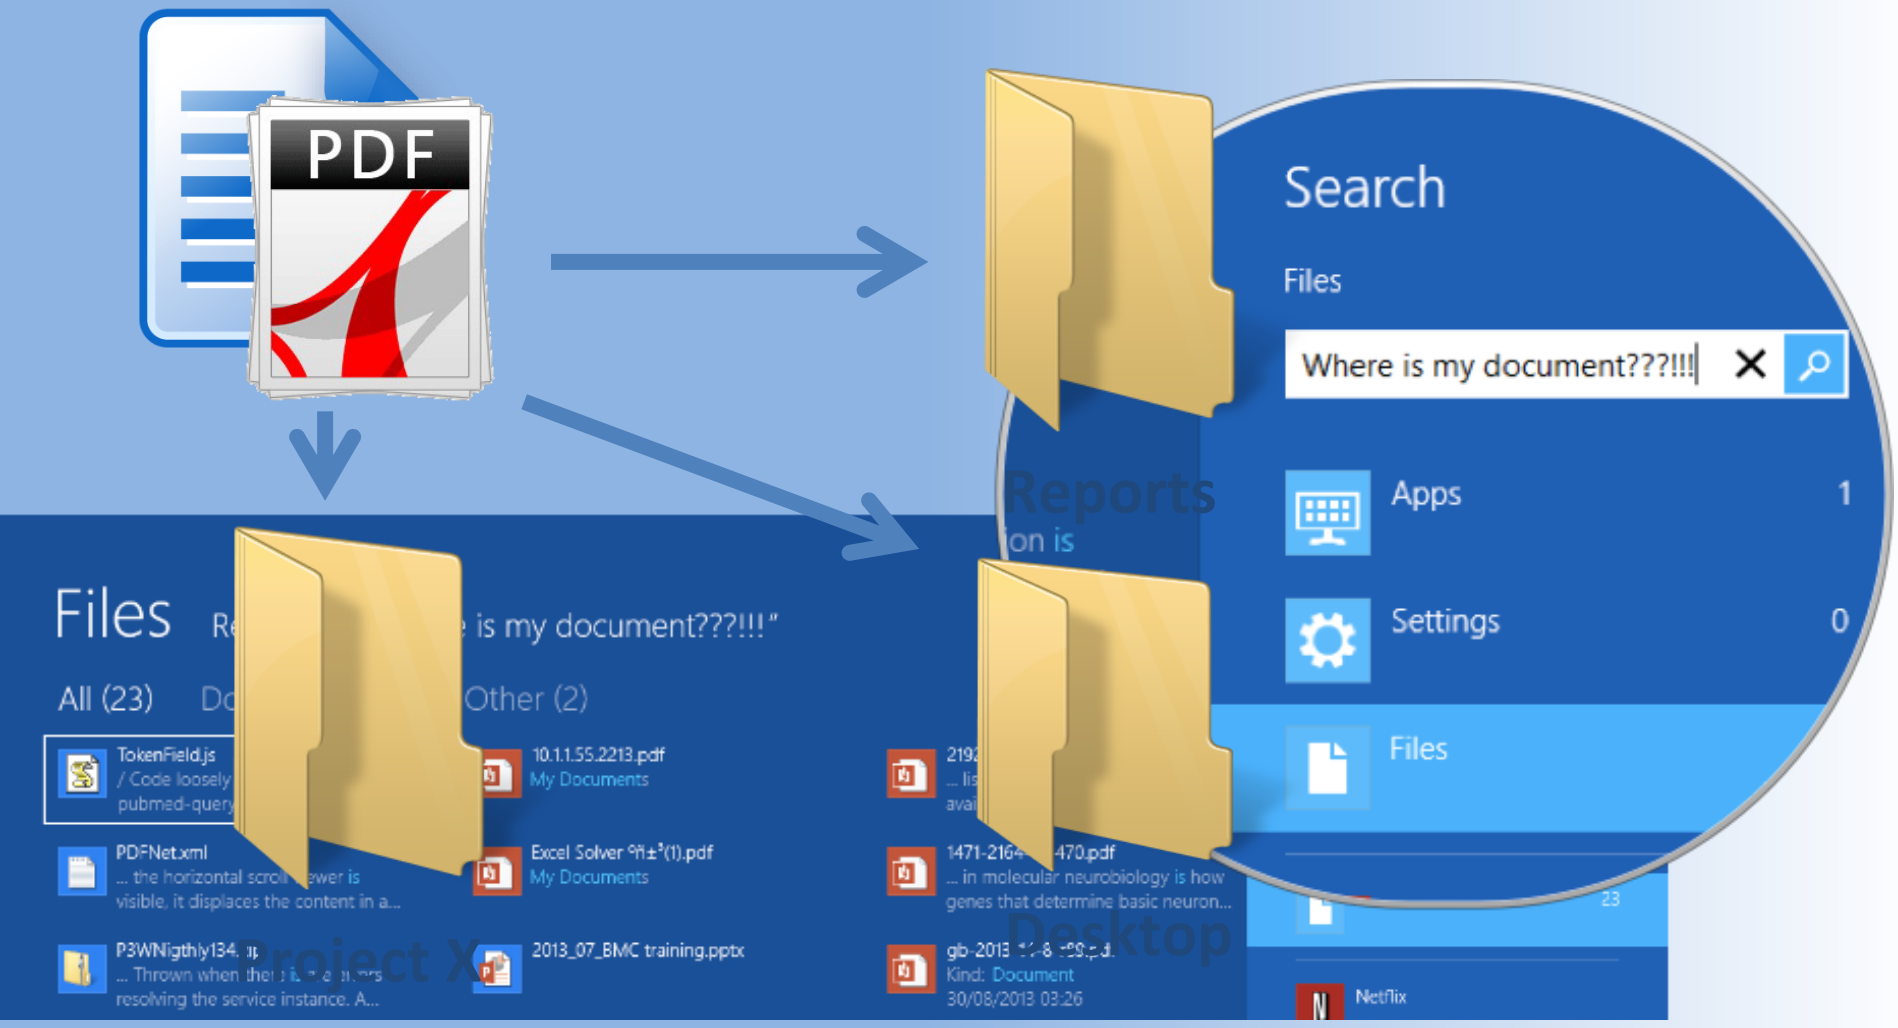
An estimated **1.8 million** peer reviewed articles were published in 2012

Ware & Mabe, 2013. The STM report

On average, researchers and students spend 12 hours per week on finding, collecting, analyzing & applying information?

Why do people spend so much time finding, collecting, and analyzing information?

What happens to documents on *your* computer?



What could happen to documents on your computer . . .

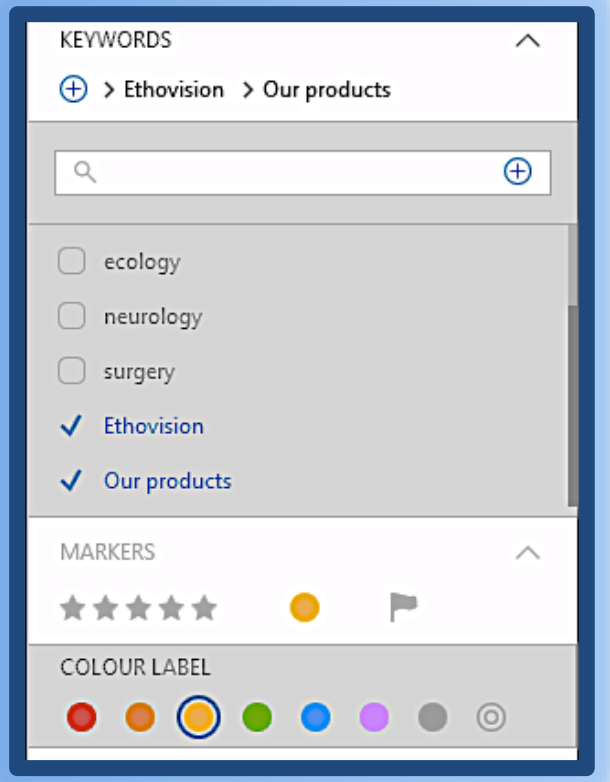
Reports



What is Papers?

- Your personal library of research
- Collect and curate research material

- **Find** articles and documents of interest
- **Import** and automatically **organize**
- **Read** • highlight • annotate
- **Cite** references
- **Share** articles • comments • metadata
- **Collaborate**

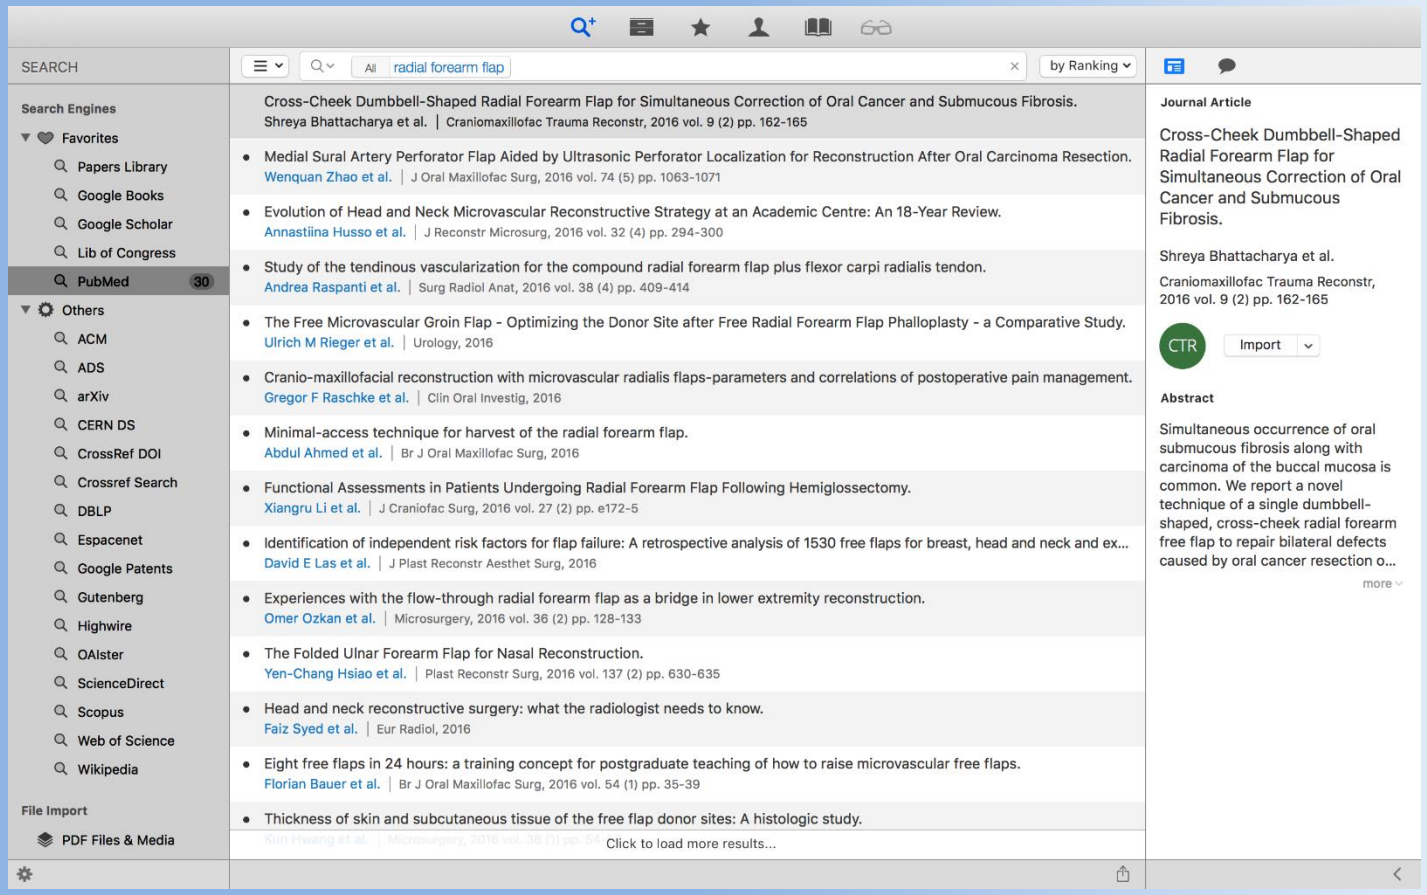
Find

Federated search across 20+ search engines. From PubMed and Scopus to arXiv and Google Scholar

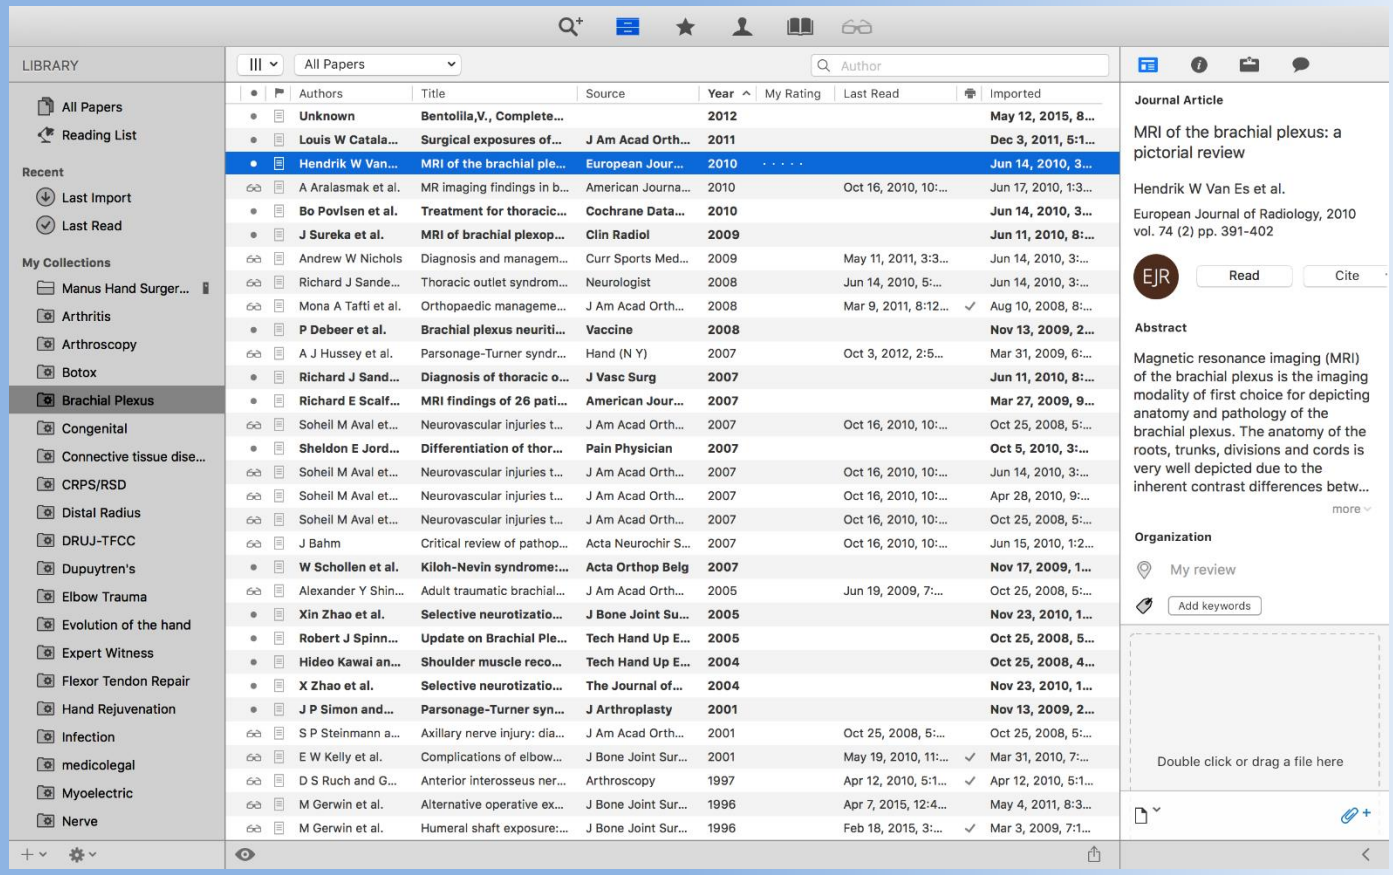
Search across your favorite search engines in one go. Multiple results can be imported into library with single click



Organize

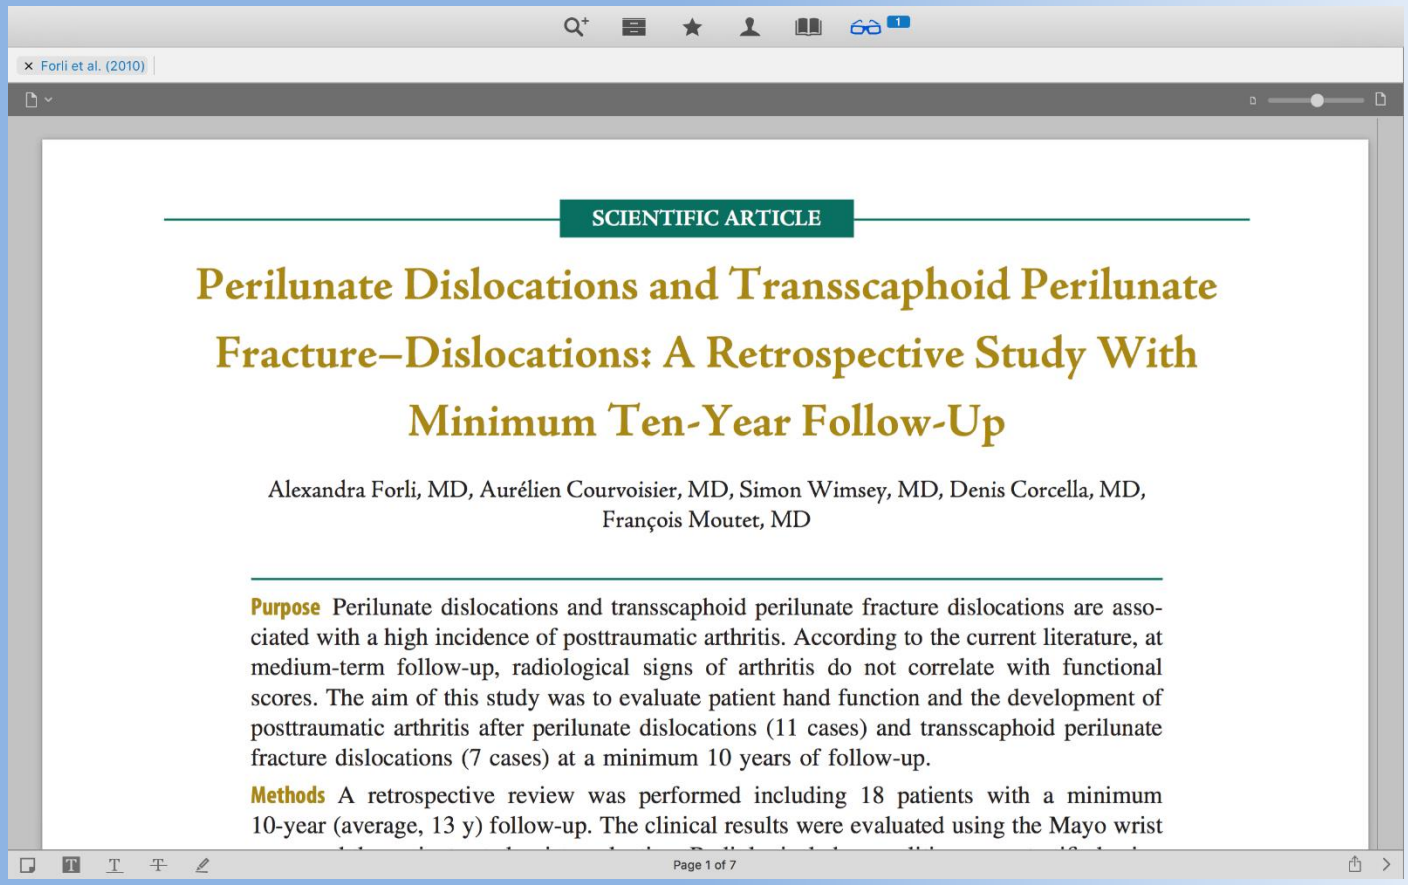
Automatically renames and organizes 85+ document types

Make Smart Collections that auto-populate



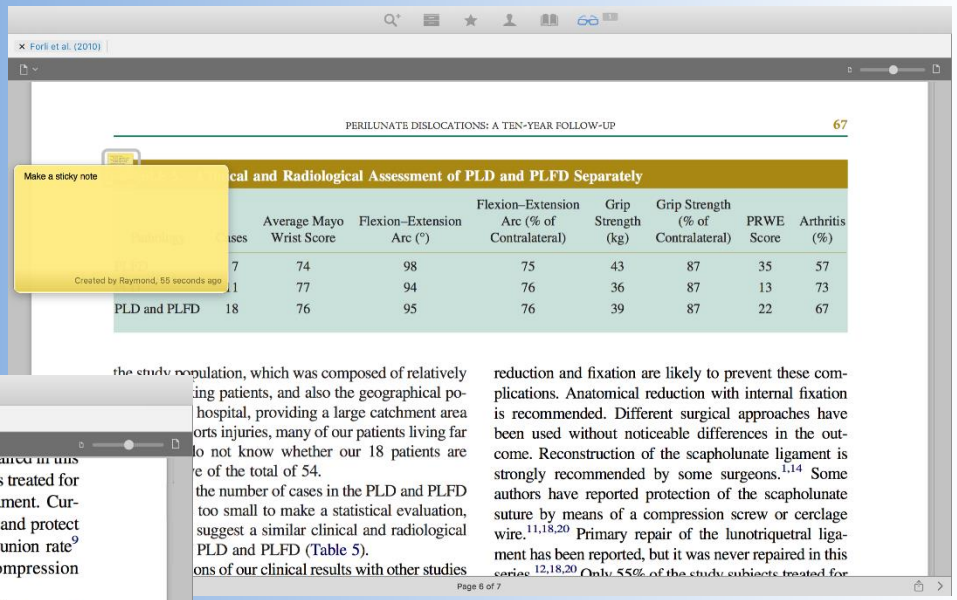
Read

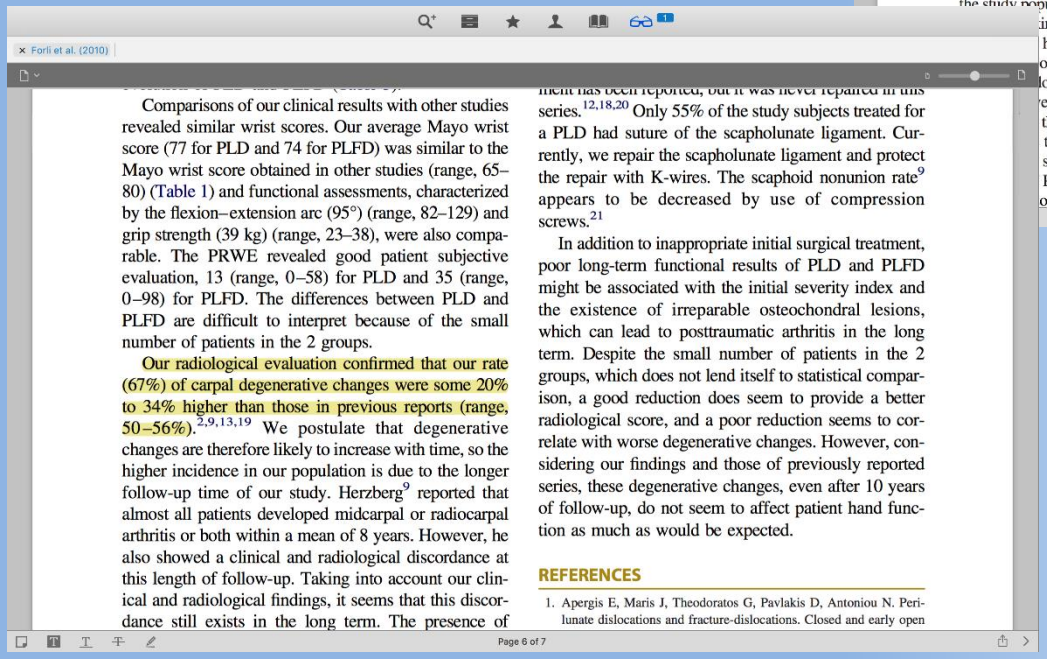
Take advantage of the full screen reader



Annotate

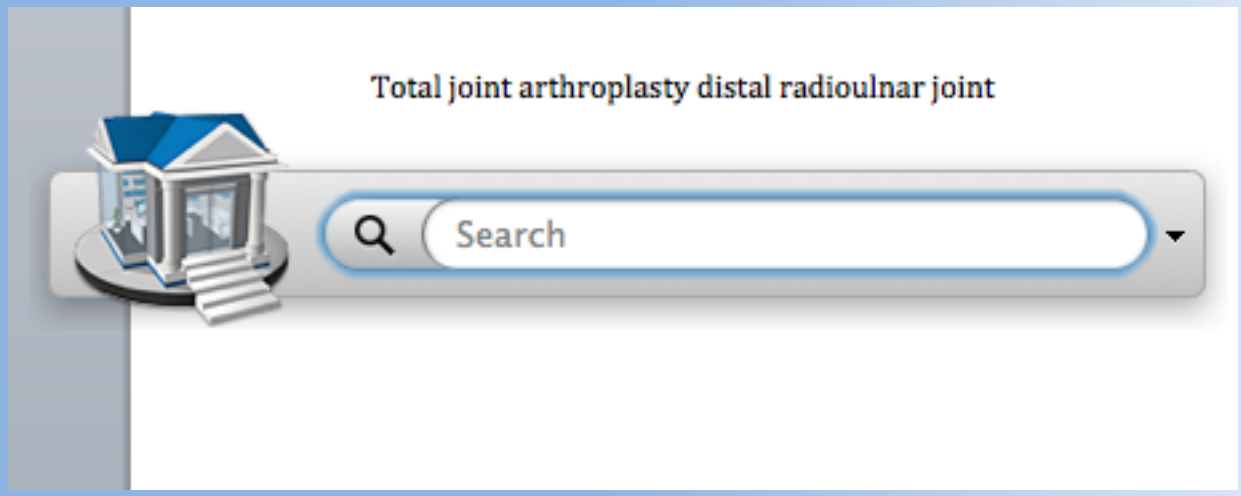
- Papers helps you focus on the task at hand
- Highlight, underline, strike through and add sticky notes





Magic Citation

- Makes writing manuscripts easier
- Press control button x 2 from any window



Over 7000 citation styles for multiple journals

Foodomics: a new comprehensive approach to food and nutrition

Francesco Capozzi, Alessandra Bordoni

Download PDF (149 KB)

Within this Article

Abstract

In the past 20 years, the scientific community has faced a great development in different fields due to the development of high-throughput, omics technologies. Starting from the four major types of omics measurements (genomics, transcriptomics, proteomics, and metabolomics), a variety of omics subdisciplines (epigenomics, lipidomics, interactomics, metallomics, diseasomics, etc.) has emerged. Thanks to the omics approach, researchers are now facing the possibility of connecting food components, foods, the diet, the individual, the health, and the diseases, but this broad vision needs not only the application of advanced technologies, but mainly the ability of looking at the problem with a different approach, a systems approach
