

HealthLoop[®] scales the impact of care teams through the power of patients.

With HealthLoop, care teams are no longer forced to limit support to specific patient populations outside of the care setting.

HealthLoop's software solution enables care teams to engage all patients before and after admission through automated daily check-ins. By sending the right information at the right time, HealthLoop identifies those patients that need help in real-time, allowing care teams to reach more patients and proactively intervene before costs and complications escalate.

Maximize Care Management Performance

Remote guidance and monitoring tools cover your blind spots and enhance your clinical quality.

54%
reduction in complications

45%
reduction in readmissions

= **\$650 Savings per case**¹
